

## Interview Extract from Environment Times Jan 10 edition

Chartered engineer, Barry Paschali, generated extensive interest in his unique new business when he officially launched Paschali Engineering and Management Consulting at the prestigious Energy Solutions section of the Working Buildings Exhibition at the London Olympia in October 2009.

Paschali Engineering and Management Consulting has already attracted the attention of global firms – including Regus, the world’s top provider of pioneering workplace solutions, for which Barry is helping to install a greener working policy, plus guidance on CRC Energy Saving Scheme compliance (previously known

as the Carbon Reduction Commitment).

The UK-wide mandatory CRC scheme, starting in April this year, is a key area on which Barry provides guidance and support to organisations.

Barry provides tailor-made practical sustainability direction in the areas of renewable energy, low carbon consulting, and existing buildings.

“I help organisations to cut a clear path through the sustainability jungle, demystifying legislative complexities and demonstrating how you can add real bottom line value to your business,” said Barry.

Barry’s company also gives support to existing building owners in meeting the new BREEAM In-Use standard.

Barry also offers ‘green’ training seminars, in-house, and around the UK.

He will additionally be speaking at the Midlands CRC Energy Efficiency Scheme conference on 26<sup>th</sup> January.
