

Energy Surveys Aren't The Answer

With the mandatory Carbon Reduction Commitment (CRC) looming in April this year and an ignored energy survey sitting on your desk, it can be challenging to work out how to add more to your bottom line in this economic climate.

It really doesn't have to be that daunting. In fact, CRC can be used positively as a catalyst for everyone in your organisation to pull together for your very own carbon reduction and energy saving strategy – allowing your company to really save significant money with very little outlay and position itself as a genuinely environmentally friendly organisation.

Energy Surveys on their own simply don't work; many are produced without a proper understanding of the business needs and so are inappropriate. You need a company-wide and customised sustainability plan embracing: staff culture and behavioural change; current & future maintenance strategies; energy consumption targets; and a motivational communications scheme for staff and clients alike.

Paschali Engineering and Management Consulting offers independent and unbiased direction and support to help you put this in place.

They can:

- advise and help you on all aspects of CRC compliance;
- guide you through the implementation and management of a bespoke carbon reduction and energy saving (sustainability) plan;
- show you how to easily achieve Carbon Trust Accreditation;
- and advise on the newly introduced BREEAM In-Use for existing buildings

They offer free in-house 'green' seminars and you can also download their series of information leaflets from their website: www.paschali.co.uk

Contact Barry Paschali on 0845 505 0255 or email info@paschali.co.uk

Energy Surveys Aren't The Answer

With the mandatory Carbon Reduction Commitment (CRC) looming in April this year and an ignored energy survey sitting on your desk, it can be challenging to work out how to add more to your bottom line in this economic climate.

It really doesn't have to be that daunting. In fact, CRC can be used positively as a catalyst for everyone in your organisation to pull together for your very own carbon reduction and energy saving strategy – allowing your company to really save significant money with very little outlay and position itself as a genuinely environmentally friendly organisation.

Energy Surveys on their own simply don't work; many are produced without a proper understanding of the business needs and so are inappropriate. You need a company-wide and customised sustainability plan embracing: staff culture and behavioural change; current & future maintenance strategies; energy consumption targets; and a motivational communications scheme for staff and clients alike.

Paschali Engineering and Management Consulting offers independent and unbiased direction and support to help you put this in place.

They can:

- advise and help you on **all** aspects of CRC compliance;
- guide you through the implementation and management of a bespoke carbon reduction and energy saving (sustainability) plan;
- show you how to easily achieve Carbon Trust accreditation;
- and advise on the newly introduced BREEAM In-Use for existing buildings

They offer free in-house 'green' seminars and you can also download their series of information leaflets from their website: www.paschali.co.uk
